Research and Development of Offline Handwritten Signature Verification Algorithm based on Transformer

Submitted by: 王茗琛

Student No.: 2230025907

Supervisor: 劉新

Abstract

This research deals with the supervisory control problem of discrete event systems. Use singular keywords. Keywords are separated by commas or semicolons, and there is often a period at the end.

The template can be used in online and offline ways. For the former (highly recommended), Overleaf (https://www.overleaf.com) is a collaborative cloud-based LaTeX editor used for writing, editing and publishing scientific documents, which is much easy to use and friendly.

For the latter, one can use Texstudio, which is a very popular yet free software package (https://www.texstudio.org/). When using Texstudio, the compiling command is XeLatex. To make Texstudio work, one need to first install Miktex, see https://miktex.org/. We happen to find, rather rarely, that a successful compiling may depend on the version of Texstudio. In any case, we recommend the latest version of Texstudio.

keywords: Discrete event system; supervisory control; fault diagnosis.

摘要

中文摘要一般 300 到 500 字且使用繁體. 使用西文方式下的標點符號. 比如, 像這樣. 若對模板使用有任何問題, 可 email 至 zhwli@ieee.org.

關鍵詞: 一般使用 3–5 個關鍵詞，中間用分號隔開.

3.1 xxxxxx

We give some examples of how to make tables.

The table title is at the top of the table.

Table 1: A table.

Class[a]	γ_1	γ_2[b]	$\langle\gamma\rangle$	G	$|f|$	θ_c
BL Lacs	5	36	7	-4.0	1.0×10^{-2}	$10°$
FSRQs	5	40	11	-2.3	0.5×10^{-2}	$14°$

Table 2: Another table.

i	x_i	n_i	i	x_i	n_i
1	0.5~0.64	1	8	1.48~1.62	53
2	0.64~0.78	2	9	1.62~1.76	25
3	0.78~0.92	9	10	1.76~1.90	19
4	0.92~1.06	26	11	1.90~2.04	16
5	1.06~1.20	37	12	2.04~2.18	3
6	1.20~1.34	53	13	2.18~2.38	1
7	1.34~1.48	56			

3.2 xxxxxx

xxxxxx.

Formal expression is very important.

Example 1:

$$e^{\pi i} + 1 = 0 \tag{1}$$

Example 2:

$$a^2 + b^2 = c^2 \tag{2}$$

If no equation number is needed, we can use double dollars at the beginning and end of the equation.

$$\cos x + \sin y = 1.$$

Example 3:

$$\binom{n}{m} = \binom{n}{n-m} = C_n^m = C_n^{n-m} \tag{3}$$

Example 4:

$$(a+b)^3 = (a+b)(a+b)^2 = a^3 + 3a^2b + 3ab^2 + b^3 \tag{4}$$

Here are more examples of mathematics equations or expression.

$$x = a_0 + \cfrac{1}{a_1 + \cfrac{1}{a_2 + \cfrac{1}{a_3 + \cfrac{1}{a_4}}}} \tag{5}$$

$$\frac{\begin{array}{c}(x_1 x_2)\\ \times (x_1' x_2')\end{array}}{(y_1 y_2 y_3 y_4)}$$

$$P\left(A = 2 \,\middle|\, \frac{A^2}{B} > 4\right)$$

$$M = \begin{bmatrix} \frac{5}{6} & \frac{1}{6} & 0 \\ \frac{5}{6} & 0 & \frac{1}{6} \\ 0 & \frac{5}{6} & \frac{1}{6} \end{bmatrix}$$

$$M = \begin{array}{c} \\ A \\ B \end{array}\begin{array}{cc} x & y \\ \left(\begin{array}{cc} 1 & 0 \\ 0 & 1 \end{array}\right) \end{array}$$

$$f(n) = \begin{cases} n/2 & \text{if } n \text{ is even} \\ -(n+1)/2 & \text{if } n \text{ is odd} \end{cases}$$

$$\binom{n}{r} = \frac{n!}{r!(n-r)!}$$

Here are some logic expressions:

$$(\forall s \in \overline{K})(\forall \sigma \in \Sigma)(\forall s' \in \overline{K}) s\sigma \in L(G) \ \& \ s'\sigma \in L(G) \ \& \ Ps = Ps' \implies s' \in \overline{K}.$$

For more details about mathematics equations or expressions, see https://en.wikibooks.org/wiki/LaTeX/Mathematics.

4. XXXX (another topic if necessary)

4.1 Algorithm

An example of the Algorithm 1.

Algorithm 1: Control policy construction

Input: Control parameter r_i, time series $Backgrd(T_i)=T_1, T_2, \dots, T_n$ and similarity threshold θ_r

Output: Control policy $con(r_i)$

1 $con(r_i) = \Phi$;
2 **for** $j = 1; j \leq n; j \neq i$ **do**
3   float $maxSim = 0$;
4      $r^{maxSim} = null$;
5   **while** *not end of* T_j **do**
6   compute Jaro(r_i, r_m);   % here are the commentary texts
7      $con(r_i) = con(r_i) \cup r^{maxSim}$;
8 return $con(r_i)$;
